

Requirements of deploying servers (using CMSV platform)

1. Server configuration requirements

Recommended server configuration :

Main server (1)

CPU: 4 cores

Memory: 8G

Suggested width: 39M

Operating system: Windows Server 2008 64-bit (Or higher version)

System disk: 200GB

GPS data disk: 206GB

Active safety data disk: 3000GB

Server deployment system and configuration requirements:

A, Supported operating system 64-bit: windows server 2008 and above and windows7, windows10

B, CPU: 8 cores or more

C, RAM: 8G or more

Broadband and storage should be decided according to the actual situation , Calculate bandwidth and store
